

The diagram shows a cross-section of a tunnel with a rounded top. A thick black line represents the cutting line, which follows the inner curve of the tunnel. A red line, representing the cutting line, is shown as a thin line along the outer edge of the tunnel. The text explains that the design must follow the flow direction to avoid protrusions.

De rode lijn is de snijlijn.
Zorg ervoor dat je ontwerp
doorloopt in de afloop,
dit voorkomt witranden.
